**Preliminary Amendment** 

Applicant(s): Baumann et al.

Serial No. Unknown (Parent Serial No. 10/109,804)

Filed: Herewith (Parent: March 28, 2002)

For: DECK ASSEMBLY FOR A SELF-PROPELLED, WALK-BEHIND ROTARY LAWN MOWER

## Amendments to the Claims

Page 4 of 9

This listing of claims replaces all prior versions, and listings, of claims in the aboveidentified application:

## **Listing of Claims**

## 1-5. (Cancelled)

6. **(Original)** A deck assembly for a walk-behind rotary lawn mower, the deck assembly comprising:

a deck defining a cutting chamber operable to house a cutting member, wherein the cutting chamber is bound at least in part by a rear enclosure member;

a rear discharge port located, when the mower is in an operating configuration, on a rear portion of the deck; and

a duct of substantially rectangular cross section extending through the rear enclosure member between the cutting chamber and the rear discharge port, the duct having a first, uppermost surface and a second, lowermost surface, wherein the first, uppermost surface and the second, lowermost surface both form substantially horizontal planes.

- 7. **(Original)** The deck assembly of claim 6, further comprising a mulch plug operable to engage and selectively plug the duct.
- 8. (Original) The deck assembly of claim 6, wherein the first, uppermost surface is formed at least in part by an underside of the deck.
- 9. (Original) The deck assembly of claim 6, wherein the duct is formed at least in part by the rear enclosure member.

Applicant(s): Baumann et al.

Serial No. Unknown (Parent Serial No. 10/109,804)

Filed: Herewith (Parent: March 28, 2002)

For: DECK ASSEMBLY FOR A SELF-PROPELLED, WALK-BEHIND ROTARY LAWN MOWER

- 10. (Original) The deck assembly of claim 6, wherein the rear enclosure member defines at least a portion of the second, lowermost surface.
- 11. (Original) The deck assembly of claim 6, wherein the rear enclosure member is secured to the deck with one or more fasteners.
- 12. **(Original)** The deck assembly of claim 6, wherein a duct axis of the duct is substantially parallel to a longitudinal axis of the mower.
- 13. (Original) The deck assembly of claim 12, wherein the duct axis of the duct is laterally offset from the longitudinal axis of the mower.
- 14. **(Original)** A deck assembly for a walk-behind rotary lawn mower, the deck assembly comprising:
- a deck defining a cutting chamber operable to house a cutting member, wherein the cutting chamber is bound at least in part by a rear enclosure member;
- a rectangular rear discharge port located, when the mower is in an operating configuration, on a rear portion of the deck; and
- a duct of substantially rectangular cross section extending through the rear enclosure member between the cutting chamber and the rectangular rear discharge port, the duct defining a duct axis that is substantially parallel to a longitudinal axis of the mower.
- 15. (Original) The deck assembly of claim 14, wherein the rectangular rear discharge port has a transverse width and a vertical height, wherein the transverse width is greater than the vertical height.
- 16. (Original) The deck assembly of claim 14, wherein at least a portion of the duct is formed by an underside of the deck.

For: DECK ASSEMBLY FOR A SELF-PROPELLED, WALK-BEHIND ROTARY LAWN MOWER

17. (Original) The deck assembly of claim 14, wherein at least a portion of the duct is formed by the rear enclosure member.

Page 6 of 9

18. (Original) The deck assembly of claim 14, further comprising a transmission proximate the rear discharge port and operable to power two rear wheels, wherein the transmission is drivingly coupled to a prime mover via an endless belt.

- 19. (Original) The deck assembly of claim 18, wherein the endless belt extends through the cutting chamber along an underside of the deck.
- 20. (Original) The deck assembly of claim 18, wherein the endless belt extends through a portion of the rear enclosure member.
- 21. (Original) The deck assembly of claim 20, wherein the endless belt is at least partially enclosed between an underside of the deck and a belt cover secured to the underside of the deck.
- 22. (Original) The deck assembly of claim 21, wherein the belt cover has a shape that substantially conforms to a shape of the underside of the deck.
- 23. (Original) The deck assembly of claim 21, wherein the belt cover abuts the rear enclosure member.
- 24. **(Original)** The deck assembly of claim 14, further comprising a side discharge port located, when the lawn mower is in the operating configuration, generally along a lateral side portion of the mower, the side discharge port having a door associated therewith, the door operable to selectively cover the side discharge port.
- 25. (Original) A walk-behind rotary lawn mower, comprising:

Serial No. Unknown (Parent Serial No. 10/109,804)

Filed: Herewith (Parent: March 28, 2002)

For: DECK ASSEMBLY FOR A SELF-PROPELLED, WALK-BEHIND ROTARY LAWN MOWER

a deck assembly comprising:

a deck defining a cutting chamber operable to house a cutting member, wherein the cutting chamber is bound at least in part by a rear enclosure member;

a side discharge port located, when the mower is in an operating configuration, generally along a lateral side portion of the deck, the side discharge port having a door associated therewith, the door operable to selectively cover the side discharge port;

a substantially rectangular rear discharge port located, when the mower is in the operating configuration, on a rear portion of the deck; and

a duct of generally rectangular cross section extending between the cutting chamber and the rear discharge port, the duct defined in part by a lower surface and an upper surface, wherein both the lower surface and the upper surface form substantially horizontal planes;

a plurality of wheels operable to support at least the deck assembly in rolling engagement with a ground surface;

a prime mover coupled to the deck assembly; and

a cutting blade located within the cutting chamber, the cutting blade rotatable under control of the prime mover.

- 26. (Original) The lawn mower of claim 25, wherein the duct is formed at least in part by the rear enclosure member.
- 27. (Original) The lawn mower of claim 25, wherein the rear enclosure member defines opposing sides of the duct, the opposing sides forming substantially vertical planes.
- 28. (Original) The lawn mower of claim 25, further comprising a collection apparatus operable to fluidly couple to the rear discharge port.

For: DECK ASSEMBLY FOR A SELF-PROPELLED, WALK-BEHIND ROTARY LAWN MOWER

29. (Original) The lawn mower of claim 25, wherein one or more of the plurality of wheels is operatively driven by the prime mover.

- 30. **(Original)** The lawn mower of claim 25, further comprising a mulch plug operable to engage and effectively seal the rear discharge port.
- 31. (Original) The lawn mower of claim 25, wherein the door further comprises a latching device operable to substantially immobilize the door when the door covers the side discharge port.

32-33. (Cancelled)
